Thank you for choosing Excalibur Technology's Net-Safe for your online backup solution. Once the software has been installed on your machine you are just steps away from having your data safely backed up to our secure servers. Your data will be encrypted using 448 bit encryption before being sent over the Internet to our secure network operations center. Rest assured that your data is secure with the highest level of encryption. Net-Safe will perform a full backup of all of your data the first time. Files will then be backed up as they change throughout the day by default. In the event of a disaster your data can be restored from any location with an Internet connection. Please use this guide to help you get started backing up your data.

Install Net-Safe:

1. Before installing Net-Safe Cloud Backup please uninstall any previous version of Net-Safe you have installed.
2. To download the installer, open a browser and go to <https://netsafecloud.excaltech.net> and log on using the credentials you have been provided.
3. Run the installer and select all defaults.
4. For an existing account, enter your credentials and the server address: netsafecloud.excaltech.net. Click Connect.
5. For a new account, select "New Account", and enter your name. Your email address should be your Username, and create a password. Enter the registration key provided to you by Excalibur Technology and the server address: netsafecloud.excaltech.net
6. Click "Create Account"

CLOUD BACKUP

Create your Account

Please enter your username and password. This information identifies you and encrypts your files so nobody else can access them.

New Account Existing Account

First name:

Last name:

Username:

Password: Very Strong

Registration key:

PRO Server address:

*****Please keep your username and password in a safe place as you are the only one that can restore your files*****

Create the Backup Set:

When Net-Safe is first opened you will be on the backup tab. By default your My Documents folder will be selected for backup.

To configure your backup set click the Change button and select the files/folders you would like to backup. Once all files/folders have been selected click the Save button.

Click the Backup button to start backing up immediately. There is no more set schedule for Net-Safe. The initial backup will run and back everything up. From there as files are changed they will be backed up automatically.

The next section will cover some advanced settings like changing what hours the backup can and can't run.

Please Note

- You must have a connection to the internet to backup.
- The first backup can take over 8 hours depending on the amount of data that you are backing up and the speed of your Internet connection.
- The program will try to backup open files. They will be skipped if the file is locked. All files should be closed to ensure a complete backup.
- If you need to back up mapped network drives, System State, SQL or Exchange contact our office for assistance in setting that up.

Advanced Settings:

Click the Settings tab on the left hand side of Net-Safe.

General tab:

- If you want Net-Safe to only run during certain hours change the “Net-Safe will run” option from “Automatic” to “Between specified times” then indicate the times.

Backup tab:

- To configure the backup frequency and versions to keep click the Configure button next to “backup frequency and versioning”. Please note the more versions you keep the more storage your account will take up. By default backed up files will never be deleted.
- Under Backup Status and Alerts you can set the delivery times of your reports and under the Configure button you can set the frequency of alerts and reports.

Account tab:

- Set your personal information here. This is the email address that will be used for reporting. Only one email address can be listed.

Security tab:

- You can change your encryption key here if desired. If this key is lost or forgotten your data will not be recoverable.

Network tab:

- You can limit the bandwidth Net-Safe uses here.

Data Restoration:

1. To restore data click on the Restore tab on the left hand side.
2. Navigate through the file tree and select the files you would like to restore. You can also search for files at the top.
3. If you do not want to restore the most recent version of the backup click the link at the bottom that says “most recent” then select a different date.
4. To specify where you want to restore the files to click the link at the bottom that says “Desktop”. You can restore to the desktop, original location or a specified folder.
5. Use the “rename” link at the bottom to choose whether the original file will be renamed or overwritten by the restore. When renaming Net-Safe will add “original1.” To the front of the existing file.
6. Click the Restore button to start the process.

Thank you once again for choosing the Excalibur Technology’s Net-Safe Cloud backup solution. This completes the quick start setup instructions. There are more options that have not been discussed. If you need additional support please contact us at 847-842-9570 and select option 4 for support. **Please be sure that you have clicked the Backup button on the Backup tab otherwise the backup will not start or run.**
